

PRESS RELEASE - JUNE 22nd, 2017

Hunter McKenzie L.P.(HMK) is pleased to announce that we have expanded our current offerings to include Aerial Capabilities. Through a local partnership, we can now offer Aerial Surveys, Inspections, and General Photography/Videography services to a wide array of commercial sectors.

Industries We Serve

- Oil & Gas
- Mining
- Agriculture
- Renewable Energy
- Construction
- Insurance

Aerial Services We Provide

- Inspections (onshore & offshore)
- Thermal Imaging
- Corporate Video Production
- Aerial Mapping
- Orthomosaic Imaging
- Marketing Footage

Orthomosaic Imaging - Flying in a grid pattern, allows us the ability to create high definition images of a site (or large equipment) without that "annoying" perspective shift quite commonly found when photographing from a raised man-lift or a fix-winged plane. This method also provides much better image quality than that of commercial satellite images.

Thermal Imaging - Putting a thermal imaging camera in the air has made it possible to inspect or investigate those hard to reach places and locations, like never before. We can inspect for water penetration, proper insulation, structural issues, confined space hazards, and much more. In wide-open spaces, we can search for wildlife, livestock, forest or pocket fires, vegetative distress, and even lost people.

3D Modeling - Using a captured grid pattern, we can develop a fully functional 3D model. Because there is so much overlap, specific points are calculated from different angles, thereby indicating elevation. These points are placed on a 3D grid with the photo images shown. Faces can be connected between the points to provide a clear and effective model. Using this same process, we can provide contour line maps for the sites, as well. Furthermore, all outdoor projects are GPS located, with additional precision controlled from ground control points.

Marketing Vision - With several drones at our disposal, we will choose the right camera for the project; whether that is still images, video, or a combination of both. Our high-octane style coupled with our cinematic vision is sure to capture the attention of your audience. We will work diligently to ensure that your presentation is as professional as you can envision.

Adding this new ability to our existing "Engineering Support" services greatly expands our ability to fully meet our clients' needs. With one eye in the sky and the other eye on your documentation, we are certain we can fully deliver on our commitment to be the best option when considering a solution to "Simplifying your Complex Information".

If you would like to know more, please don't hesitate to contact us. We look forward to discussing your needs and/or ideas.
